Question:

---

List and describe the three approaches to policy development presented in this chapter. In your opinion, which is best suited for use by a smaller organization and why? If the target organization were very much larger, which approach would be more suitable and why?

---

Answer:

---

----STEP1----

The three approaches to policy development presented are as follows:

- The enterprise information security program policy. It shows the direction, coverage and the quality of the program.
- The issue specific information security policies. These provide assistance to the employees of the firm concerning the application of information security.
- The system specific information security policies. These provide direction to the managers and the employees engaged in the technical aspects. It forms the general information security atmosphere.

In the case of a smaller organization, the enterprise information security program policy will be a good option. It can be made to suit the objectives and goals of the firm which is crucial for a small firm. This makes it highly suitable for a small firm.

A large firm can effectively utilize the issue specific information security policies. The superiority of this approach is based on the fact that it is possible to integrate more detailed aspects in issue specific information security policies compared to the enterprise information security program. It integrated more generally defined strategies.
